

Outreach Engine

User Guide and Training Manual

Field	Value
Product	Outreach Engine, the internal outreach console
Address	https://outreach.somvanshitechnologies.digital
Document version	1.0
Date	2026-09-25
Audience	Everyone who will use the console: administrators, operators and viewers

This guide walks through the software screen by screen. It starts with signing in, then the one-time setup an administrator does, then the daily work of running a campaign and reviewing drafts, and finally monitoring and troubleshooting. Every screenshot was taken on a demonstration copy of the software filled with sample companies; the screens look the same in production.

Table of contents

1. What the software does
2. Roles and what each role can do
3. Signing in and finding your way around
4. One-time setup (administrator)
5. Your own profile and sender address
6. Preparing a lead sheet
7. Creating a campaign
8. Starting a campaign and what happens next
9. Reviewing and approving drafts
10. Following a campaign: overview, leads, stats

12. Replies, bounces and unsubscribes
13. The link page recipients see
14. Managing users (administrator)
15. Audit log and System page
16. Daily checklist
17. Questions and answers
18. Glossary

1. What the software does

Outreach Engine sends personalised cold emails to a list of contacts, one contact at a time, and follows up automatically. For every contact it:

1. **Researches** the person and their company from the details in your spreadsheet, using the Claude model.
2. **Picks the service** from your catalogue that fits them best.
3. **Writes a short, personal email** following your tone, format and rules documents.
4. **Checks the draft** against hard rules (word count, banned phrases, number of links).
5. **Waits for a person to approve it** (manual mode) or sends it straight away when it passes the checks (auto mode).
6. **Sends through Amazon SES** from your own domain and **tracks** delivery, opens, clicks, bounces, complaints and replies.
7. **Schedules follow-ups** on the days you set, in the same email thread, and stops the sequence as soon as the contact replies, bounces or unsubscribes.

Everything is driven from the browser. There is nothing to install.

2. Roles and what each role can do

Every login has one role. An administrator assigns it when creating the account.

Role	Can do	Cannot do
Viewer	Open the dashboard, look at campaigns they were given access to, read drafts, leads and stats	Change anything
Operator	Everything a viewer can, plus create campaigns, start, pause and resume them, approve, edit, reject and regenerate drafts, manage their own instruction documents and sender profile	Touch campaigns created by other people (unless an admin grants access), manage users, change organisation settings
Administrator	Everything: all campaigns, organisation settings, services, organisation-wide instructions, the link page, users, the audit log, stopping any user's sending	

Who sees what. An operator only sees campaigns they created, plus campaigns an administrator has shared with them (section 11). The dashboard numbers follow the same rule unless the administrator sets the user's dashboard scope to "all".

3. Signing in and finding your way around

Open <https://outreach.somvanshitechnologies.digital> in Chrome, Edge or Firefox. Enter the email address and password the administrator gave you.

A login form for 'Outreach Engine' centered on a light blue background. The form is a white rounded rectangle containing the title 'Outreach Engine', the instruction 'Sign in to continue', an email input field with 'admin@example.com', a password input field, and a blue 'Sign in' button.

Outreach Engine
Sign in to continue

Email

Password

Sign in

After five wrong passwords the account is locked for fifteen minutes. If you forget your password, an administrator can set a new one on the Users page.

Once signed in you land on the **Dashboard**.

- The screen has three areas:
- **Left menu.** Every page of the console. Administrators see two extra entries, Users and Audit log.
 - **Top bar.** A yellow badge appears when the system is in test mode (emails are not really sent); in production there is no badge. Your name, role and the Log out button are on the right.
 - **Bottom left.** The software version and how many emails have gone out today against the daily limit.

The dashboard shows, for the period you choose: emails sent, delivered, opened, clicked, replied, bounced and complained, the same numbers over time, recent delivery events, the health of the sending account and how much the model has been used.

Your session stays signed in for fourteen days on the same browser. Use **Log out** on a shared computer.

4. One-time setup (administrator)

Do these once, in this order, before the first campaign. Each takes a few minutes.

4.1 Settings

Menu: **Settings**. This page holds the organisation-wide defaults.

Inbox placement

Delivery mode

Personal (one-to-one)

Messages are shaped like a hand-written email: no List-Unsubscribe headers, no styled footer, a plain "just reply and let me know" opt-out line. This is what keeps mail out of Gmail's Promotions tab.

Track opens below adds a minimal HTML part so SES can insert its open pixel. Turn it off for the cleanest text-only send (opens will then not be measurable; replies and clicks still are).

Reply capture

No SES inbound domain is configured: replies are only captured through IMAP polling.

☒ Forward replies received by SES to the campaign owner's mailbox (Reply-To set to the lead)

IMAP mailboxes polled: none (users can add their own under My profile)

Sending

Defaults for every campaign. A user's own sender identity (My profile) or a campaign override takes precedence.

Work through the sections from the top:

Section	What to set
Inbox placement	Delivery mode. <i>Personal</i> (recommended) sends plain, one-to-one style emails that land in the Primary tab. <i>Bulk</i> adds tracking and unsubscribe headers used by newsletters.
Reply capture	Whether replies that arrive on the reply domain are forwarded to the campaign owner's mailbox. Leave on.

Section	What to set
Sending	The default From email and From name (must be on the verified domain), an optional Reply-to, the daily cap across all campaigns, the send rate per second and the default approval mode for new campaigns.
Postal address	Printed at the bottom of every email.
LLM	Which Claude model drafts and which one researches, and whether research may use web search.
Hard rules	The automatic validator: minimum and maximum words, maximum subject length, maximum links, banned phrases, required phrases, domains never to contact, and switches to forbid emojis, links, exclamation marks and ALL-CAPS words. A draft that breaks a rule is regenerated automatically, and if it still fails it is flagged in the review queue.
Track opens / Track clicks	Whether the mail system records opens and clicks. Turning opens off sends text-only email, which is the cleanest for inbox placement but means the Opened figures stay empty.
Sending window	Start hour, end hour, timezone and days of the week on which emails may go out. Emails approved outside the window wait for the next slot.

Press **Save** at the top right. **Export xlsx** downloads all settings, hard rules, instruction documents and services in one spreadsheet, useful as a backup or to copy to another installation.

4.2 Services

Menu: **Services**. This is the catalogue the model chooses from when it decides what to pitch to a contact. The better the descriptions, the better the emails.

v1.0.0 - development

Sent today 2/300

Field	Guidance
Name	Short and recognisable, as it may appear in emails and on the link page.
URL	The page on your website; the link page uses it for the "Learn more" button.
Description	What it is, how it is delivered, typical outcomes. Two or three sentences.
Target audience	Who it is for, so the model can judge fit.
Value propositions	One per line. Concrete benefits, not slogans.
Proof points	Real results and case studies. The model may only claim what is written here.
Tags	Free keywords for your own filtering.

Deactivate a service instead of deleting it when you stop offering it. Inactive services are not pitched but past emails keep their history. **Import xlsx** loads many services at once from a sheet with the same column names.

4.3 Instructions

Menu: **Instructions**. These documents are injected into every draft the model writes. Four kinds exist:

Kind	Purpose	Example
Tone	How the email should sound	"Warm, direct and specific. No hype words. No exclamation marks."
Format	Structure and length	"Greeting on its own line, two to four short paragraphs, one question as the call to action."

Kind	Purpose	Example
Rules	What the model must never do	"Never invent numbers, customers or quotes. Never mention pricing."
Signature	The sign-off appended to every email	"Best regards, Vigneya Bhatt, Somvanshi Technologies"

Deactivate

Delete

The software ships with sensible defaults for all four. Edit them rather than starting from scratch. Press **New instruction** to add a document or **Upload file** to load a .md, .txt or .docx file.

Edit (new version) on a document saves your changes as a new version and keeps the old one inactive (tick **Show inactive** to see it). **Deactivate** switches a document off without deleting it. Only active documents are used.

Organisation and personal documents. Administrators manage the organisation documents that apply to everyone. The page has two tabs, **Organisation** and **Mine**. Each user can write personal documents under Mine; a personal document of a kind replaces the organisation document of that kind for that user's campaigns only. Changes affect drafts written from then on; use **Regenerate** on a draft to apply them to something already in the queue.

4.4 Link page

Every email carries one small link at the bottom (by default "Manage preferences"). It opens a page that shows your services and lets the recipient contact you or, if you enable it, unsubscribe. Section 13 describes it. Configure it under **Services** → **Manage link page**.

4.5 Users

Create a login for each colleague under **Users** (section 14). At minimum set their name, email, role and password. If they will send from their own address, fill in their From name and From email too.

5. Your own profile and sender address

Menu: **My profile**. Every user has one.

- **Sender identity.** Display name, From name, From email, Reply-to and postal address. Blank fields fall back to the organisation settings. Emails from campaigns you own go out with these details. The From email must be an address on the verified company domain; the page refuses anything else and tells you which domains are allowed.
- **Reply polling (IMAP).** If you want the console to notice replies that land in your own mailbox, enter your mailbox's IMAP host, port, username, folder and password and turn it on. The console reads the mailbox every few minutes without changing or deleting anything. **Test connection** checks the details before you save. This is optional; replies to the reply domain are captured automatically without it.

- **Password.** Change your own password here. All other sessions are signed out when you do.

6. Preparing a lead sheet

A campaign starts from an Excel file (.xlsx) or CSV with one contact per row. The first row must be the column headings.

Column	Required	Notes
Email	Yes	One address per row. Rows without a valid address are skipped and reported.
First name, Last name	Recommended	Used in the greeting.
Company	Recommended	Drives the research.
Job title	Recommended	Helps the model pitch at the right level.
Website	Recommended	The model reads it during research when web search is on.
LinkedIn, Industry, Location, Phone	Optional	Extra context.
Notes	Optional	Anything you know about the person. It is used verbatim by the model, so write it as facts ("expanding to Dubai in 2027").

Column names are matched flexibly ("First Name", "first_name" and "FirstName" all work). Columns the software does not recognise are kept as extra data and shown on the lead's page.

Before uploading, remove anyone who has asked not to be contacted. The software also checks every address against the suppression list (section 12) and skips those automatically.

7. Creating a campaign

Menu: **Campaigns** → **New campaign**. The wizard has three steps.

Step 1: Upload leads

Choose the lead sheet. The console analyses it immediately and shows how each column was understood and the first rows.

Setting	What it does
Campaign name	How it appears in lists and reports.
Approval mode	Manual review: every draft waits for a person in the review queue. Auto-send: drafts that pass the hard rules are sent without review. Start with manual until you trust the output.
Description	Notes for colleagues.

Setting	What it does
Follow-up sequence	Step 1 is the first email. Each later step has a delay in days after the previous email was sent, guidance for the model, and a "Threaded" switch that keeps it in the same conversation (reply subject and quoted thread). Add or remove steps as needed; three steps is a good default.
Services to pitch	Tick services to limit the campaign to them, or leave all unticked to let the model choose from every active service.
Sender	Optional From email, From name and Reply-to for this campaign only. Blank means your profile, then the organisation settings.
Extra guidance	Campaign-specific instructions added to the instruction documents, for example "Mention that we are based in Pune".
Max words override, Additional banned phrases	Tighten the hard rules for this campaign only.

Press **Continue**.

v1.0.0 · development

Sent today 0/300

Stage	What is happening	Typical time
Pending	Waiting for a free slot.	Seconds to minutes
Researching	The model builds a short profile of the person and company, and matches services.	About one minute per contact
Drafting	The model writes the email for the current step and the validator checks it.	Under a minute
Pending review	The draft is waiting for you in the review queue (manual mode).	Until you act
Approved / Scheduled	Approved and waiting for the sending window or the follow-up date.	

Stage	What is happening	Typical time
Sent, Delivered, Opened, Clicked, Replied	Tracked from the mail system.	
Bounced, Complained, Unsubscribed, Failed	The sequence stops for this contact.	

The **Pipeline** boxes on the campaign Overview show how many contacts are in each stage. Refresh the page to see progress. The **Leads** tab lists every contact and, for scheduled follow-ups, the exact date and time the next email will go out.

Pause stops new research, drafting and sending immediately; emails already approved stay approved. **Resume** picks up where it left off. **Archive** ends the campaign for good.

9. Reviewing and approving drafts

Menu: **Review queue**. It lists every draft waiting for approval across the campaigns you can see. The **Review queue** tab inside a campaign shows only that campaign's drafts.

Company
Unknown — no verifiable company-specific information was obtained. The lead record appears to be placeholder/test data (website domain uses the IANA-reserved .example TLD, email domain does not match, LinkedIn slug follows a placeholder pattern). Inference only: Blue Harbour Realty is most likely a residential real estate brokerage, channel partner, or small developer operating in Pune/Pimpri-Chinchwad, probably selling under-construction or newly launched projects via a lead → tele-calling → site visit → booking motion.

Hooks

- Internal sheet note: "Wants a CRM that talks to the site-visit booking form" — usable only if it came directly from Arjun or his team, not if it was a colleague's guess

Pain points

- Website site-visit booking form not connected to a CRM — needs integration with de-duplication, source/UTM capture and round-robin assignment
- No proper site-visit scheduling flow: slot selection, confirmation SMS/WhatsApp, reminders, rescheduling, no-show tracking
- High lead volume and poor lead quality from portals (Housing.com, MagicBricks, 99acres) and Meta/Google ads, making speed-to-lead and duplicate detection critical

Research confidence: low

Matched services

Custom Web Applications fit 9/10

The stated need is connecting a site-visit booking form on the website to a CRM, with assignment and de-duplication. That is integration and internal-tool work, which is exactly this service, and fixed-scope sprints suit an owner-operator who wants a fast yes/no.

Data Pipelines & Analytics fit 6/10

Once enquiries flow into one place, Arjun still lacks a view of leads to site visits to bookings by source and salesperson. Useful as a second step, but secondary to the plumbing he asked about.

Pitch angle: He has already named the problem: the booking form does not talk to a CRM. Lead with that plumbing job, note we are down the road in Pune on IST, and keep the ask to one short question.

Subject

Booking form to CRM, Blue Harbour

Body

Hi Arjun,

I saw a note that you want your site-visit booking form talking to a CRM. That is usually a small piece of plumbing that quietly decides how fast an enquiry gets called back.

We build that kind of integration: form to CRM, source captured, duplicates caught, leads assigned to the right person automatically. Fixed scope, a working release every two weeks, and the code is yours.

We are based in Pune and work IST hours, so a site visit is easy if that helps.

Worth a short call to check whether you already have a CRM in place or need one built?

Approve **Regenerate** **Reject**

Each entry shows, on the left, what the model found: the person's role, a summary of the company, personalisation hooks it used, pain points, the matched services with a fit score and the pitch angle. On the right is the email itself: subject and body, both editable, and any validator warnings underneath.

For each draft you can:

Button	Effect
Approve	The email is queued to send (within the sending window). If you changed the text the button reads Save & approve and your version is sent.
Regenerate	Ask the model for a fresh draft, optionally with a note on what to change ("shorter", "lead with the data angle"). The old draft is discarded.
Reject	Nothing is sent to this contact for this step; give a reason for the record. The contact is marked as skipped.

Karan Bose

Creative Director - Studio Umbra

karan.bose@example-media.in

Step 1 Pending Review

Company

Unverified. All identifiers supplied (studio-umbra.com, linkedin.com/in/karan-bose, values, and the website fetch failed, not confirmed. From the spreadsheet row with a Creative Director and an interest in video production, the most plausible inference is that the company is involved in video production or post-production studio work. The revenue is not specified.

Hooks

- None verifiable. The only usable hook is 'video subtitling' — treat it as our primary phrase as a question, not a claim.
- Safe framing: reference the general need for language content and ask whether they are actively looking at this quarter?

Pain points

- Subtitling/transcription and subtitle translation across Indian languages, including burn-in vs sidecar file generation and QC of machine output. Indian-language ASR and code-switched Bengali/Hindi/English speech remain hard, so human-in-the-loop review is usually the realistic answer.
- Repetitive creative/admin work: first-pass script and copy variants, auto-tagging and classifying an asset library, summarising client feedback threads, generating cutdown metadata.
- Client review/approval workflow — versioning, timecoded comments, approvals (moderate fit; off-the-shelf products already serve this, so a bespoke build only makes sense if the workflow is unusual).

Research confidence: low

Matched services

AI Automation fit 9/10

The only usable hook is the note that they are exploring AI-assisted video subtitling. Our AI Automation service covers document/communication extraction and drafting with human review built in, and we have a directly relevant proof point: automated subtitle generation for a 40-person media agency, which matches their size and

Subject

Subtitling for multilingual video

Body

Hi Karan,

production jobs where AI helps a lot and fails in public. When speakers switch between Bengali, Hindi and English mid-sentence, checking the output before it ships.

ation for a 40-person media agency, with human review built into the workflow. We usually start with a two-week pilot on a small project to ensure quality yourself.

hours, so reviews happen in your day.

ing you are actively looking at this quarter?

Regenerate draft

Feedback for the LLM (optional)

e.g. Too long, lead with the hiring signal, drop the second service

CancelRegenerate

Edit before approving. Click into the subject or body, change what you like, then press Save & approve. An "Unsaved edits" note reminds you that the text differs from the model's draft.

Approve everything at once. On the campaign page, **Approve all** (the number in brackets is how many are waiting) approves every pending draft in that campaign after a confirmation. Use it only after you have read a good sample.

Follow-ups also come here. In manual mode, every follow-up step is drafted a little before its due date and waits in the queue like a first email. Approve them the same way.

10. Following a campaign: overview, leads, stats

AI Automation

fit 9/10

Their report-digitisation programme implies large volumes of

Persona

confidence: low

Company

Placeholder/unverified lead record: identifiers use the IANA-reserved .example TLD, so the company may not be real. Based only on an internal sheet note ("Digitising diagnostic lab reports for 200 collection centres"), Meridian Health Labs is inferred to be a Mumbai, India diagnostics business operating a hub-and-spoke model — a few processing labs serving ~200 sample collection centres. It is ambiguous whether it operates labs (patients/doctors as customers) or sells software to lab operators. Revenue model unknown: Indian diagnostics is typically per-test/per-package B2C cash plus B2B rate-card contracts with corporates and insurers.

Healthcare / diagnostics services, India (regulatory context: NABL accreditation, Clinical Establishments Act, DPDP Act 2023, ABDM/ABHA and FHIR/HL7 standards) · Only signal: "200 collection centres" (internal sheet note, unverified) — implies a regional-to-multi-city mid-market operator, plausibly ₹50–300 crore revenue, but a guess with wide error bars. Headcount, funding, investors, founding year and revenue unknown. A dedicated CTO title weakly suggests at least a small in-house engineering team.

Person

A CTO likely owning the LIS and its analyser integrations (HL7/ASTM), the patient-facing app/portal and report delivery (SMS/WhatsApp/email/PDF), collection-centre operations tooling (order booking, barcode/sample tracking, chain-of-custody, phlebotomist routing), franchisee onboarding, rate cards, billing and settlement, data security and DPDP compliance over PHI, integrations with ABDM/ABHA, insurers/TPAs, hospitals and aggregator marketplaces, plus MIS/reporting for finance and operations.

Pain points

- Legacy and partner reports exist as PDFs/scans: extracting analytes, units, reference ranges and flags into structured records is manual document-extraction work suited to a Claude-based pipeline with human-in-the-loop review
- Messy test nomenclature across centres and partner labs needing normalisation to a canonical dictionary (LOINC mapping)
- No franchisee/collection-centre portal for order entry, sample status, stock and settlements; nor doctor/corporate-client portals for bulk results and health-checkup cohorts
- No internal ops console for TAT breaches, sample rejections and re-runs
- LIS + billing + CRM + app events rarely share a warehouse, so centre-level P&L, TAT by test/centre, repeat-patient rates and B2B contract profitability

Likely priorities

- Completing the report-digitisation programme across all 200 centres — consistency, turnaround time, and structured data rather than scanned PDFs
- Getting structured, comparable data out of historical reports and third-party/partner lab reports arriving as PDFs or images
- Single source of truth across sales (B2B contracts), operations (TAT, sample rejection rates) and finance (franchisee settlement, revenue per centre)
- Compliance posture under DPDP and, if pursuing government/insurer tie-ups, ABDM interoperability
- Scaling the tech team or choosing build-vs-buy for portals and internal tools

Stats breaks the numbers down by step and over time.

Export status.xlsx (top right of the campaign page) downloads every contact with their status, timestamps and the text of each email sent, for reporting or for loading into a CRM.

12. Replies, bounces and unsubscribes

Replies. Emails go out with a Reply-to on the company reply domain. When a contact answers, the console records the reply, marks the contact as **Replied**, cancels their remaining follow-ups and forwards the message to the campaign owner's own mailbox, so you answer it from there like any other email. If a reply arrives elsewhere (for example the contact wrote to a different address), press **Mark replied** on the lead page so follow-ups stop.

Bounces and complaints. A hard bounce or a spam complaint stops the sequence and adds the address to the suppression list automatically. The dashboard shows both rates; keep bounces under 5% and complaints under 0.1% or the sending account is at risk.

Suppression list. Menu: **Suppressions**. Addresses here are never emailed again, by any campaign. Entries arrive automatically from bounces, complaints and unsubscribes; add one by hand with **Add address** (for example someone who asked by phone), import a list with **Import**, or download the whole list with **Export xlsx**. **Remove** an entry only when the person has asked to hear from you again.

The screenshot shows the 'Outreach Engine' internal console. On the left is a sidebar menu with options: Dashboard, Campaigns, Review queue, Services, Instructions, **Suppressions** (highlighted), Settings, Users, Audit log, System, and My profile. The main content area is titled 'Suppression list' with a subtitle 'Addresses that will never be emailed: hard bounces, complaints, unsubscribes and manual entries'. It includes a search bar and buttons for 'Export xlsx', 'Import', and 'Add address'. A table displays one suppression entry:

EMAIL	REASON	SOURCE	NOTE	ADDED	
donotcontact@example.in	Manual	dashboard	Asked us not to email on 2026-09-20	Sep 25, 2026, 4:42 PM	Remove

Below the table, it shows '1-1 of 1' and navigation buttons 'Prev', '1 / 1', and 'Next'. At the bottom left, it says 'v1.0.0 - development' and 'Sent today 2/300'. At the top right, it shows 'Administrator (admin)' and a 'Log out' button.

13. The link page recipients see

Every email ends with a small link, "Manage preferences" by default. It opens a public page with your headline, an introduction, a card for each service with **Learn more** and **Contact** buttons, and, if you switch it on, an unsubscribe button.

A little about what we do

Somvanshi Technologies builds software for growing Indian businesses. Here is a quick look at the services we offer.

AI Automation

Practical AI features inside existing workflows: document extraction, drafting, classification and assistants built on Claude.

- Starts with a two-week pilot on real data
- Human review built in from day one

[Learn more](#)[Contact us](#)

Custom Web Applications

Design and build of bespoke web applications: customer portals, internal tools, dashboards and integrations, delivered by a dedicated team.

- Fixed-scope sprints with a working release every two weeks
- Modern stack (React, Node, PostgreSQL) with full source handed over
- Ongoing support after launch

[Learn more](#)[Contact us](#)

Data Pipelines & Analytics

Reliable data pipelines, warehouses and dashboards so teams see one version of the truth across sales, operations and finance.

- Automated daily reporting instead of manual spreadsheet work
- Alerts when numbers move unexpectedly
- Works with existing tools (Shopify, Tally, Zoho, Google Sheets)

v1.0.0 · development

Sent today 2/300

System shows whether the database, job queue and sending account are healthy, the queues' backlog, today's send count against the cap, when the sending statistics were last refreshed and the status of reply capture. Look here first when something seems stuck.

16. Daily checklist

Ten minutes a day keeps campaigns moving.

1. Open **Review queue** and work through waiting drafts: approve, edit, regenerate or reject.
2. Glance at the **Dashboard**: are bounces or complaints rising? If so, pause the campaign and look at the lead source.
3. Check your mailbox for forwarded replies and answer them.
4. On each active campaign's **Leads** tab, look at contacts marked **Failed** and press Retry or Skip.
5. Once a week, download **Export status.xlsx** for reporting.

17. Questions and answers

Nothing is happening after I started the campaign. Research takes about a minute per contact and only a few run at once. Refresh the campaign page after a couple of minutes. If the Pipeline boxes still do not move, check the **System** page for a queue error and tell the administrator.

A draft says it failed validation. The model broke a hard rule (usually too many words or a banned phrase). Press Regenerate, or edit the text yourself and Save & approve.

Can I change the follow-up days after starting? No. Pause or archive the campaign and create a new one with the right sequence; contacts already emailed can be left out of the new sheet.

An email was approved but has not been sent. Sending only happens inside the sending window set in Settings, and the daily cap may have been reached (see the bottom left of the screen). It goes out at the next opportunity.

Someone asked to stop receiving emails. Open their lead page and press Unsubscribe, or add their address on the Suppressions page. All follow-ups stop immediately.

A colleague cannot see my campaign. Ask an administrator to grant them access from the campaign's Access tab.

I want to send from a different address. Set it under My profile. It must be on the verified company domain; the page tells you if it is not.

Why does the model sometimes pitch the "wrong" service? It chooses from the descriptions in Services. Improve the target audience and value propositions there, or tick specific services in the campaign's settings.

18. Glossary

Term	Meaning
Campaign	One lead sheet plus one sequence of emails.

Term	Meaning
Lead	One contact in a campaign.
Sequence, step	The planned emails to a contact: step 1 is the first email, later steps are follow-ups.
Draft	An email the model has written but that has not been sent.
Review queue	Drafts waiting for a person to approve them.
Hard rules	Automatic checks every draft must pass.
Instruction documents	Tone, format, rules and signature text given to the model.
Services	The catalogue of what you offer.
Suppression list	Addresses that must never be emailed.
Link page	The public page behind the small link at the bottom of each email.
Sending window	Hours and days during which emails may go out.
Daily cap	Maximum emails per day across all campaigns.
SES	Amazon Simple Email Service, the system that delivers the emails.
